Documentation AutoCAD allows its users to use the Help system. AutoCAD documentation is available through tutorials, sample files, and help files. Tutorials are interactive websites that guide users through the steps required to complete a simple drawing. Sample files provide example files that users can use to create a drawing. A help system is available through the Help button in the application. Help files provide the documentation for the features of AutoCAD. They can be printed in hardcopy, read online or by using one of the many computer-aided help (CAH) systems that make use of the help files. File formats AutoCAD includes a native file format, which is a well-defined binary data format for storing CAD models. AutoCAD native file format is based on the native binary file format introduced by AutoLISP, which in turn is based on the binary file format used in Lisp, the language AutoCAD was originally written in. An example of a native file format is the DWG file format. AutoCAD native files are self-contained, independent files. A native file is suitable for loading into a viewer, it does not depend on other files. AutoCAD native files can also be converted to a number of other file formats, including those used by various CAD software packages. AutoCAD native files can also be converted to and from the native file format and various formats supported by the native file format. AutoCAD native files do not contain the syntax of a drawing or feature class. They are purely a binary format and contain only a description of a single entity. If additional entities need to be included, separate files are required. AutoCAD includes some formats that are not native AutoCAD files, but are files used by AutoCAD: Excel-based formats, powerpoint-based formats, and database formats. Some formats are used in certain files that are created or used by AutoCAD. These formats, including the powerpoint-based format, are commonly called AutoCAD-specific formats. For example, the powerpoint format, was introduced by AutoCAD for use in Powerpoint-based layouts. AutoCAD users often use the powerpoint format to create presentations containing the drawings created with AutoCAD. Several non-native file formats have been created, including dxf, ppt, dbf, rdb, csv, jpg, bmp, png, tif, tga, pdf a1d647c40b
